Building Maters

Mitigating climate change transition risks of the construction sector through building capacity in sustainable building materials

Objectives

The project aims to support awareness raising of key stakeholders in sustainable pathways for mitigating climate change transition risks of the construction sector. The project anticipates to develop green sectoral skills and competences in the area of sustainable building materials, through introducing future-oriented and innovative curricula and learning practices tailored to the needs of learners, enabling sustainable behavioural changes in line with the New European Bauhaus initiative.

Activities

- Desk research for investigating sustainable approaches for building materials
- National and transnational interaction roundtables with key stakeholders from the construction industry and the VET sector
- Development of the Sustainable Building Materials Curricula provided in an E-learning environment
- Training Activity: Transnational capacity building of Building Maters training ambassadors
- Sustainable Building Materials Demonstration sessions / webinars
- Awareness raising outreach campaign

Results

The project will build capacity and raise awareness in sustainable building materials, responding to the emerging material and prices crises in the construction sector, along with the promotion of sustainable behaviours and approaches, for mitigating climate change transition risks of the sector. It will result in modernising VET by accommodating green sectoral training offers and boost local, national and transnational sustainable alliances, facilitating knowledge transfer and joint actions.
